

University of Maryland at College Park
DEPT. OF AEROSPACE ENGINEERING

ENAE 641: Estimation and Control of Stochastic Systems

Information and Grading Policy

Course Information:

Instructor:	Prof. Rob Sanner
Office:	EGR-3186
Email:	rmsanner@umd.edu
Website:	http://elms.umd.edu
Office Hrs.:	T/Th 4-6 (via Zoom)

Course Grading:

6-7 Problem Sets	20%
2 Midterm Exams	65%
1 Final Project	15%

Grades will be assigned based on the overall weighted average according to the following scheme: 85% or greater will yield an A; 70-85% will yield a B, and 55-70% is a C. +/- boundaries will be at equally spaced divisions within these ranges. Nominally, no curve will be applied to the raw scores, although this may be revisited if the scores show an unusually low distribution.

Suggested Textbooks:

There are no required course texts. Everything you need to complete the assignments and exams will be contained in the course notes. For those desiring additional references I suggest the following, in rough order of utility:

Hespanha, J., *Linear Systems Theory*, 2nd ed., ISBN 0691179575.

Chen, C., *Linear Systems Theory and Design*, 3rd ed., ISBN 0195117778.

Skogestad, S. and Postlethwaite, I., *Multivariable Feedback Control*, ISBN 0471943304.

Rugh, *Linear System Theory*, 2nd ed, Prentice Hall, 1996.

Maciejowski, *Multivariable Feedback Design*, Addison Wesley, 1990.

Homework/Exam Policies:

Students are encouraged to discuss the problem sets in groups, as this is a proven effective method for learning the material. All material submitted, however, *must be your own unique work*, including any computer code used.

Homework is usually due (on Gradescope) 7-10 days after it is posted on ELMS. Solutions for each homework will normally be available on ELMS about a week after the homework is due. Homeworks will be accepted after their nominal due date with a flat 15% late penalty, but only until the corresponding solution is distributed. Late homework will not be accepted after its solution has been distributed.

Midterm exams will be in class, at the regularly scheduled class time. Dates will be announced in class, but are expected roughly mid-October and end of November. The Final Project will be take home, and due before the end of final exam week.
